

Avery's Pond

North Fork of the American River, Pioneer Express Trail Milepost 47.5

Folsom Lake State Recreation Area, Placer County

by Robert H. Sydnor, M-AERC, LBHA Trails Committee

June 2009 LBHA Newsletter

Springtime is a splendid opportunity for horseback riding amidst the wildflowers at Avery's Pond, located about 1.2 miles north of the Rattlesnake Bar Equestrian Assembly Area, at Milepost 47.5 of the historic Pioneer Express Trail. LBHA riders will enjoy scenic views of the full reservoir of Folsom Lake along the North Fork of the American River.

Purple vetch, red & yellow aster, and yellow sticky-monkey. There is also purple lupine, but my Arabian horse prefers purple vetch, which is evidently more tasty than baled alfalfa.

Directions to Staging Area at Rattlesnake Bar

From Auburn-Folsom Road, drive eastward on Newcastle Road, then descend steeply onto Rattlesnake Bar Road. Enter Folsom Lake State Recreation Area at the toll booth, then continue 0.4 mile on a paved road to the large graveled equestrian assembly area at Rattlesnake Bar. The parking lot has one outhouse, but no water for horses. The historic Pioneer Express Trail passes through here, so follow trail signs leading northward.

Pioneer Express Trail to Avery's Pond, about 1.2 miles

This trail bed is generally in good condition. However, there are about 200 yards of steep exposure (= a cliff) that descends 60 to 80 feet to Folsom Lake below, plus three landslides so that the outside berm of the trail is missing. This segment of the Pioneer Express Trail works best for calm steady horses that are *not* spooky. If you are concerned, then be prudent and simply dismount and lead your horse. This segment of trail is closed to mountain bikers, but is popular with groups of hikers because of the abundant wildflowers and spectacular scenery. So plan ahead and anticipate meeting groups of hikers at the cliff segment of the trail (near Milepost 47). Remain outwardly calm, never communicating fear to your horse.

At left: Splendid views of the full reservoir, but a steep cliff. *At right:* A steep trail-bed, with good waterbars between a rock face of granodiorite and a steep cliff below.

Water Trough and Timber Bridge at Avery's Pond

Approaching from the south, riders will see this wonderful stone water-trough that continually spills outward, so it is nearly self-cleaning. The water-trough runs continually from Winter to early Summer, but in drought conditions of a severe Autumn, the trough may be seasonally dry. A timber bridge was constructed by Eagle Scout Paul Perkins in September 1994 as a Boy Scout project. Beyond the bridge are nettlesome blackberry vines, so please carry clippers and help clear the trail of these thorns. The bridge crosses Avery Creek that descends from the west side.

Avery's Pond

The historic pond was constructed in the 1880's by Ira Avery, a pioneer rancher with extensive orchards in this area. The coordinates are 38.8302°North and 121.0915°West, with an approximate elevation of the pond surface at 530 feet, about 20 feet above the high-water shoreline of Folsom Lake. The pond was constructed probably by mule-drawn scrapers with a east berm (above the river), and the west side is excavated into natural alluvium. The historic 1854 North Fork Ditch also traverses along the west side of the American River, and small diversion ditch provided water into Avery's Pond. A number of seasonal floods eroded both the ditch and the pond, which were then repaired by earth-scrappers and buckets of alluvium from the river. There were no bulldozers and dump-trucks 130 years ago! The pond is lined with fine-grained alluvium (silt, clay, and fine sand), but it evidently leaked considerably.

Ira Avery, orchardist and rancher

Ira Avery came to the goldfields as a 15-year old boy from Maine. In 1874, he married the daughter of of a local rancher, Seney Boles Avery, and they raised three children. Mrs. Avery was an educated pioneer lady and taught public school for 12 years. Ira Avery had a diverse career as a supplier to the gold mines of the Mother Lode (principally lumber and fruit, with some sheep ranching). Avery's ranch consisted of about 117 acres, of which 40 acres had 1,500 fruit trees (pears, persimmons, cherries). *Source: W.B. Lardner & M.J. Brock, 1924, History of Placer and Nevada Counties, California: Historic Record Company, p. 567-570.*

The key to the success of the fruit orchard was a year-around reliable source of water, Avery's Pond.

At left: Looking northwest across Avery's Pond from Milepost 47.5. *At right:* The outlet structure for Avery's Pond so that there is a continuous flux of water through the pond. In the center distance, notice a picnic table that can be used by horsemen.

At left: There are six picnic tables on the north side of Avery's Pond, and these also have the best shade.

At right: A view eastward across Avery's Pond, showing the berm that separates the pond from the American River (in far distance). Horses cannot be ridden on the path on the west side of Avery's Pond because of a weak narrow timber bridge at the inlet creek (=southwest corner). So picket your horse on the north side, eat lunch at the picnic tables, then walk the full perimeter of the pond to gain the full views of the river. Avery's Pond is now a splendid natural habitat for birds and wildflowers, and a great spot for horsemen to eat lunch along the Pioneer Express Trail. Bring your own drinking water in your saddlebags. There are no outhouses, since this is a remote area and not accessible for service trucks.
